

Prof. Prashant V. Kamat

University of Notre-Dame, Indiana

Lundi 28 septembre, 11h00 - Amphithéâtre Turing

Mercredi 30 septembre, 10h30 - Amphithéâtre Buffon

Vendredi 2 octobre, 11h00 - Amphithéâtre Turing

Prashant V. Kamat is a professor of science in the Department of Chemistry of the University of Notre-Dame. He earned doctoral degree (1979) in Physical Chemistry from the Bombay University, and carried out his postdoctoral research at Boston University (1979-1981) and University of Texas at Austin (1981-1983). He joined Notre Dame in 1983. Professor Kamat has for nearly three decades worked to build bridges between physical chemistry and material science by developing advanced nanomaterials for cleaner and more efficient light energy conversion.

Professor Kamat's research has made significant contributions to four areas: (1) Photoinduced catalytic processes using semiconductor and metal nanoparticles, nanostructures and nanocomposites, (2) Development of light energy harvesting assemblies (e.g., quantum dots and inorganic-organic hybrid assemblies) for next generation solar cells, (3) Utilization of carbon nanostructures (SWCNT and graphene) as conducting scaffolds to collect and transport charge carriers in solar cells and fuel cells, and (4) Environmental remediation using advanced oxidation processes and chemical sensors..

He has published more than 450 scientific papers that have been well received by the scientific community (35000+ citations) and has an h-index of 102. Science Watch of ISI included him among the Top 100 chemists of the decade 2000-2010.

In 2010, Kamat was named by the American Chemical Society as the deputy editor of the *Journal of Physical Chemistry Letters*. He is a member of the advisory board of scientific journals, *Langmuir*, *Research on Chemical Intermediates*, and *Applied Electrochemistry and Interface*. He is a Fellow of the Electrochemical Society, American Association for the Advancement of Science (AAAS), and the American Chemical Society (ACS).
